

The Business Software Designed by Rebuilders

"The ManuMetrix system gives me real benefits that I can take to the bank. Our prices are automatically updated, our jobs are correctly costed, our production is better, our customers are happy and I'm operating my business much more economically."

Ron Larson
Portland Engine Rebuilders

"We unplugged our auto parts computer and plugged in the ManuMetrix system for rebuilders.

Very soon we were getting accurate job costing, automatic shop scheduling, technical specs printed on all work orders, reduced paperwork, better customer service, greater control over the business, and increased profits.

We only wish we had made the switch sooner."

Richard and Terri Hartmann

Running your business on a computer system that is not designed specifically for rebuilders is like assembling an engine without the right parts and tools. It puts your company at a big disadvantage.

Rebuilders have special requirements that aren't found in general business systems. Take job tracking, for example. Many jobs call for dozens of steps, involve hundreds of parts, and require the work of multiple departments.

The ManuMetrix system excels at job tracking. At the touch of a button, you can find out if you have the core to build a job, who is working on what, what remains to be done, anything that may be holding up the job, and the estimated time of completion. When a customer calls to check on their job, you can give them a quick, accurate answer. And for every job, you know exactly all parts and labor costs, and how much profit you make.

Call us today, and find out what a computer system designed specifically for rebuilders can do for your business.

The Right Tool makes all the Difference.
