- Automatic Recording
- Advanced Compression
- Inactivity Timeout
- Online Help
- Automatic Resume of Recording
- Automatic Suspension of Recording
- Black & White or Color Recording
- Export to BMP or JPEG formats
- Print any Saved Images

Spector automatically takes snapshots of your display screen, as often as once per second, or as infrequently as once every few minutes. You decide how often and in what format (Grayscale or Color) Spector records.

Spector

Spector is the first automatic screen recording software designed for consumers and corporations.

Spector records PC and Internet activity, much like a camcorder, and lets you play back the recorded information. Spector records all applications loaded, all web sites visited, all chat conversations, all keystrokes typed, and all incoming and outgoing e-mail activity. You see what THEY see.

Whatever the child or employee sees on their screen, you will see when you replay their screens with Spector. There are no confusing codes to decipher, or filter lists that need constant downloading. You see what they see with Spector.

View saved images on your monitor, print screenshots or export images to .jpg or .bmp file formats.

Simple and intuitive playback of screenshot recordings. Similar to the controls of a standard VCR.

Quick - one click - access to frequently used program features such as Event Listing of URLs and Keystrokes typed, Search, Spector Options Control Panel and Online Help.

Spector is appropriate for parents concerned about how their children use the computer and what web sites their children visit. Spector will even record conversations on the Internet.

Spector is also ideal for businesses concerned about how their employees use company PCs. Recent studies indicate that many employees spend several hours a day on company time playing games or visiting inappropriate web sites. There have even been examples of employees using company PCs to download child pornography. Clearly, this is non-productive, at best. At worst it may subject your company to legal liability, especially if an employee arranges to meet a child via the Internet while at work.

System Requirements

- Windows 95, Windows 98 or Windows 2000
- Pentium-based PC running at 100 MHz or faster
- 16M of memory (32M for best performance)
- Approximately 10M of disk space for a typical day of recording
